**TOPIC**: Fractions  
**SUB TOPIC**: Reciprocals  

**COMPETENCES**

- Tell the meaning of reciprocal  
- Find reciprocals

**CONTENT**

What number do we multiply by 4 to give 1 as a product? Let the number be \( m \).

\[
4 \times m = 1 \quad \text{What number must be multiplied by 0.7 to give 1?}
\]

\[
4m = 1 \quad 0.7 \times d = 1 \quad \frac{7d}{7} = \frac{10}{7}
\]

\[
\frac{4m}{4} = \frac{1}{4} \quad 7d = 10 \quad d = \frac{10}{7}
\]

\[
M = \frac{1}{4} \quad 10 \times \frac{7d}{10} = 1 \times 10 \quad d = 1 \times \frac{3}{7}
\]

The number is \( \frac{1}{4} \)

**Application**

1. What number do we multiply by 6 to give 1 as a product?
2. What number must be multiplied by 0.2 to give 1?
3. What is the reciprocal of \( 2 \frac{1}{4} \)?
4. What is the reciprocal of $\frac{3}{4}$?
5. Calculate the reciprocal of 8.

Content

Loy spent \(\frac{2}{3}\) of her pocket money on books \(\frac{1}{4}\) of what remained on buying clothes. She was left with sh. 600. How much pocket money did she have at first?

Books = \(\frac{2}{3}\)
Remainder = \( \frac{3}{3} - \frac{2}{3} = \frac{1}{3} \)

Clothes = \( \frac{1}{4} \) of \( \frac{1}{3} \) = \( \frac{1}{4} \times \frac{1}{3} = \frac{1}{12} \)

Books and Clothes \( \frac{2}{3} + \frac{1}{12} = \frac{8+1}{12} = \frac{3}{4} \)

Fraction left = \( \frac{4}{4} - \frac{3}{4} = \frac{1}{4} \)

\[ \frac{1}{3} - \frac{1}{12} \]

Let the amount be \( y \)

\[ \frac{1}{4} \text{ of } y = 600 \]

\[ \frac{4-1}{12} \]

\[ \frac{1}{4} \times y = 600 \]

\[ \frac{y}{4} = 600 \]

\[ \frac{3}{12} = \frac{1}{4} \]

\( \frac{3}{4} \times \frac{y}{4} = 600 \times 4 \)

\( y = 2400 \)

Or Fraction used

\[ \frac{2}{3} + \frac{1}{12} = \frac{8+1}{12} = \frac{9}{12} \]

Left

\[ \frac{12}{12} - \frac{9}{12} = \frac{12-9}{12} = \frac{3}{12} \]

\[ \frac{3}{12} \text{ of } n = \text{sh. } 600. \]

\[ \frac{3n}{12} \times 12 = \text{sh. } 600 \times 12 \]

\[ \frac{3n}{3} = \text{sh. } \frac{7200}{3} \]

\[ n = \text{sh. } 2400 \]

Paddy got the following aggregates in nine tests

| Number | 8 | 2 | 6 | 9 | 4 |
| Frequency | 1 | 2 | 3 | 1 | 1 |

i) Mode = 6
ii) Modal frequency = 3 times
iii) Median 2, 2, 4, 5, 6, 6, 8, 9

Median = 6

Range = Highest – Lowest
= 9 – 2
= 7

Average = \[ \text{Sum of Data} \]
\[ \text{Number of Data} \]
= \[ \frac{8 + 2 + 6 + 4 + 5 + 9 + 6 + 2}{9} \]
= \[ \frac{48}{9} \]

Activity
1. Find the mode of the following

4. The average of 5 numbers is 6. What is the sum of the 5 numbers?

5. The average of 5 numbers is 6 and the average of 3 numbers is 16. Find the average of all the 8 numbers.

Application of average

APPLICATION OF AVERAGE

Inverse on problem on average Examples:

The mean of 2, 4, 5, 6 and q is 5. Find q.

Mean = \[ \frac{\text{total of items}}{\text{number of items}} \]
\[ 5 = \frac{q + 2 + 4 + 5 + 6}{5} \]

\[ \frac{5}{5} = \left( \frac{q + 17}{5} \right) \]

\[ 5 \times 5 = \frac{q + 17}{5} \times 5 \]

\[ 25 = q + 17 \]

\[ 25 - 17 = q + 17 - 17 \]

\[ 8 = q \]

Therefore: \( q = 8 \) Answer

**Activity**

More above inverse problem on average

**Example**
The average of 3 numbers is 12. What is the sum of the 3 numbers?

Average \[ = \frac{\text{Sum of all items}}{\text{number of items}} \]

\[ 3 \times 12 = \frac{\text{sum}}{3} \times 3 \]

\[ 36 = \text{sum} \]

\[ \text{Sum} = 36 \text{ Answer} \]

**Example II**
The average mark of 4 pupils is 6 and the average mark of 4 other pupils is 8. What is the average mark of all the 8 pupils?

The total mark of 4 pupils \[= 4 \times 6 = 24\]

The total mark of 4 other pupils \[= 4 \times 8 = 32\]

The total mark of 8 pupils \[= 24 + 32 = 56\]

The average mark of 8 pupils \[= \frac{56}{8}\]

\[ = 7 \text{ answer} \]

i) What is the mode? 

ii) What is the median? 

iii) What is the range? 

iv) Calculate the mean. 

v) Draw a bar graph to show the above information

Inverse on problem on average

Example

The mean of 2, 4, 5, 6 and q is 5. Find q.
Mean $= \frac{\text{Total of items}}{\text{Number of items}}$

$5 = \frac{q + 2 + 3 + 5 + 6}{5}$

$5 \frac{1}{1} = \frac{(q + 17)}{5}$

$5 \times 5 = \frac{(q + 17)}{5} \times 5$

$25 = q + 17$

$25 - 17 = q + 17 - 17$

$8 = q$

Therefore $q = 8$

**Activity**

Teachers collection and MK. Book 6 page --- more about inverse problem on average

**Example**

The average of 3 numbers is 12. What is the sum of the 3 numbers?

Average $= \frac{\text{Sum of all items}}{\text{Number of items}}$

$3 \div 12 = \frac{\text{sumx3}}{3}$

$36 = \text{sum}$

Sum $= 36$.

**Example II**

The average mark of 4 pupils is 6 and the average mark of 4 other pupils is 8. What is the average mark of all the 8 pupils?

The total mark of 4 pupils $= 4 \times 6 = 24$

The total mark of 4 other pupils $= 7 \times 8 = 32$

The total mark of 8 pupils $= 24 + 32 = 56$

The average mark of 8 pupils $= \frac{56}{8} = 7$

Savings

$= \frac{1}{10} \times 360°$

$= 1 \times 36°$

The pie chart represents how a man spends shs. 12,000 in a month

How much does he spend on rent?
Food = \( \frac{108}{360} \times 12,000 \) = Sh. 3600

Rent = 108 x 1200 = Sh. 3600

Fees = 360 x 12,000 = Sh. 3600

Savings = 72 x 12,000 = Sh. 864,000

ii) How much does he leave. What fraction represents fees?

\[ \frac{36}{360} \times 12,000 = 1 \times 1200 = 1200 \]

Activity
